

New chat

so i am going to make a univercity management system , will you help me

Sure, I can definitely help you with your university management system project. What specifically do you need help with?

first suggest me some site or video where i can have idea of the arcitecure

There are many resources available online that can help you learn about the architecture and design of university management systems. Here are a few suggestions:

1. Udemy: There are many courses available on Udemy that teach you how to design and develop university management systems. You can check out the course "Build a University Management System with Python" by Abhilash Nelson, which covers the architecture and design of a university management system using Python and Django.
2. YouTube: There are many videos available on YouTube that can help you learn about the architecture of university management systems. You can check out the video "University Management System | System Architecture Design | UML Diagrams" by Ankur Gupta, which explains the architecture of a university management system using UML diagrams.
3. GitHub: There are many open-source university management systems available on GitHub that you can study to learn about their architecture and design. One popular example is the "Fedena" system, which is a web-based open-source school management system.
4. Research papers: You can also find research papers online that discuss the architecture and design of university management systems. One example is the paper "Design and Implementation of University Management System Based on SOA" by Huang Zhong,
